Facilities Management/HVAC will be excavating to repair a leaking heating water pipe.

Two crosswalks need to be closed for the duration of 12 days, September 13 - 25. Two sidewalks will be closed during active excavation only. Signs will be placed as shown on drawing.

Excavation will likely include the road shoulder, but there are no plans at this time to close any drive lanes.

One handicap spot will need to be closed to accommodate the pump discharge bladder. Water at 140 degrees or less will then travel along the curb to the storm water system inlet.
